OXY-ENERGIZER

Potassium and Magnesium **Electrolyte Transport Complex**

OXY-ENERGIZER (Potassium-Magnesium-Aspartate) is one of the first products developed by Andrew Lessman in 1979 following extensive research performed in France, Germany and Japan. The original formula is the subject of a US patent and offered a fully reacted, stable complex of potassium, magnesium and aspartic acid. Potassium and magnesium are vital electrolyte minerals required in all our cells and essential for healthy heart, brain and muscle function. Oxy-Energizer was originally used to support healthy heart function in challenged environments and was subsequently adopted by elite athletes to support their increased

energy and performance requirements. It is now most frequently used to optimize cellular energy production and utilization. Oxy-Energizer assists our trillions of cells in more efficiently maintaining a beneficial intracellular balance of potassium and magnesium, thereby conserving energy for use in other essential cellular functions.
