P.M. RELAXATION™

Evening Metabolic Support
Relaxing & Lipotropic Factors

Dietary Supplement | **180** Easy-to-Swallow Capsules

Andrew Lessman's P.M. RELAXATION is designed to help achieve the greatest benefits from a day of healthy eating and activity by delivering the nutrients and botanicals to support fat metabolism while also promoting a great night's sleep. It is designed to help you naturally relax and prepare for sleep, which often becomes more difficult when dieting and exercising. Healthy sleep is essential to any weight-loss plan, since it is required to recover from yesterday's efforts and to ensure sufficient energy to inspire tomorrow's goals. We include standardized extracts from nature's soothing and relaxing botanicals, including **Valerian Root, Passionflower, Chamomile and Hops**. We also include the essential sleep hormone **Melatonin**, but at levels that support, but do not replace, your body's natural production. We also include **5-HTP**, for its support of serotonin production, which is associated with sound sleep, positive mood and appetite control. **P.M. Relaxation** also supplies a comprehensive blend of non-stimulant nutrients related to or essential for fat-burning metabolism. Most importantly, we add **Acetyl L-Carnitine** given its central role in all fat-burning metabolism. No fat can be burned without Carnitine transporting it to the location within each cell where it is burned. We also add Carnitine's natural precursors, **Lysine** and **Vitamin C** to promote optimum endogenous production of Carnitine. Just because you're asleep does not mean your body stops benefitting from all your fat burning efforts, which is the reason behind **P.M. Relaxation's** unique blend of ingredients to ensure that today's efforts are well rewarded and that tomorrow's are equally well supported.
