MAXIMUM JOINT EFFORT®

1,500 mg Glucosamine Sulfate
1,200 mg Chondroitin Sulfate
MSM (Methylsulfonylmethane)
Curcumin Phospholipid Complex

MAXIMUM JOINT EFFORT is a comprehensive blend of clinically established ingredients to provide maximum support to the structure and function of our joints. We provide optimum forms and potencies of four key ingredients for the healthy repair and maintenance of joint tissue. We begin with clinically established levels of the most well-researched natural ingredients for joint health: glucosamine sulfate (1,500 mg) and chondroitin sulfate (1,200 mg). Glucosamine and chondroitin have been the subject of thousands of scientific studies and are viewed by physicians and experts as the first line of natural defense for joint tissues. However, unlike ordinary joint products, we never use unproven glucosamine HCl (hydrochloride). We only use the form established in the scientific literature – the sulfate form. We also use our uniquely sodium-free chondroitin sulfate, which provides 70 mg of essential calcium. Typical joint products use inferior sources of both glucosamine and chondroitin, which do not possess their clinically established benefits and can adversely affect blood pressure by adding unnecessary sodium. We further enhance their benefits with an ideal source of organic bioavailable sulfur from MSM (Methylsulfonylmethane). We also include the naturally soothing benefits of turmeric from our uniquely bioavailable curcumin-phospholipid complex. Turmeric and the soothing benefits of its curcuminoids to our joints have been recognized for centuries. In short, glucosamine and chondroitin in their sulfate form, as well as MSM, provide the essential structural building blocks for healthy joints. These three structural ingredients, along with the soothing benefits of our curcumin phospholipid complex, provide maximum relief and benefits to our hardworking joints' structure and function.
